

FairFlow Guardian

Live Demo Runbook

A focused, presenter-ready guide for the actual judge demo: what to click, what should appear, what to say, and which proof to copy.

DEMO THESIS	CALM PATH	MANIPULATED PATH	EVIDENCE
No-trade is proof Better systems, not bigger bets	approved / SHORT Fairness 89/100	NO_TRADE Fairness 50/100	94/100 10 linked reports

Use this beside the app. It intentionally avoids deep architecture and focuses only on the live demonstration path.

1. Pre-Demo Setup

Goal: make the first screen instantly understandable.

Check	Do this	Success signal
App	Open <code>http://localhost:5174</code>	Dashboard loads with Competition Runway near the top.
Market	Select BTCUSDT and Calm	Decision is approved and paper-only route is visible.
Proof	Keep audit hash, evidence pack, route proof, and Copy proof visible	Judges see verifiability before performance claims.
Backup	Keep PPT, PDF, and SUBMISSION.md nearby	If network slows, demo story still works.

Do not open with a profit chart. Open with the fairness thesis: FairFlow decides whether a market is safe enough to route.

2. Exact Click Path

Use this sequence during the live screen share.

Time	Click / show	Expected screen result	Say
0:00	Start on Competition Runway	Readiness, evidence pack, route proof, audit hash visible	FairFlow proves when a market is fair enough to review.
0:15	Point to Fairness Passport and hidden cost	Hidden cost about 3.8 bps	Retail users need market-quality evidence, not just a signal.
0:34	Open Active Agents or Mission Control	Agents show propose, challenge, gate, and audit roles	The strategy agent cannot execute alone.
0:54	Open Submission Kit or Evidence Pack	10 reports bundled	Every claim is inspectable and copyable.
1:18	Click Show no-trade or Manipulated	blocked / NO_TRADE	This is the strongest proof: unsafe routing is refused.
1:41	Click Copy proof	Submission/evidence proof copied	Better systems, not bigger bets.

3. What Judges Should Notice

These are the visual signals to call out while the dashboard is live.

Screen area	What it proves	Judge takeaway
Competition Runway	The demo thesis, readiness score, evidence pack, route proof, and calm/no-trade controls are in one place.	The project is designed to be judged, not guessed.
Decision panel	Calm state is approved with SHORT and fairness 89/100.	Approval is bounded and auditable.
Fair Execution Router	Recommended route: Post-only limit; verdict: route ready.	Execution method is checked separately from strategy.
Evidence Pack	Verification score 94/100 with 10 linked reports.	Claims are verifiable from a single audit hash.
Manipulated scenario	Outcome: NO_TRADE with fairness 50/100.	No-trade is an intended protection, not a failed trade.

4. Two-Minute Voiceover

This matches the current judge-facing PPT notes.

Time	Slide	Voiceover
0:00-0:15	Thesis	FairFlow Guardian is an AI trading safety layer for the BGA track. It proves when a market is fair enough to review, and when no trade is the healthiest action.
0:15-0:34	Problem	The retail problem is not only prediction. A trade can look profitable and still be unfair because of hidden costs, thin liquidity, spoofing, leverage pressure, or opaque automation.
0:34-0:54	Agentic guardrail	FairFlow turns public market data into liquidity, volatility, cost, manipulation, and risk features. The strategy agent can propose, but execution requires fairness, risk, route, and audit gates.
0:54-1:18	Live demo path	In the demo, start with the Competition Runway: readiness, audit hash, evidence pack, route proof, and calm paper approval. Then switch to Manipulated and show the refusal.
1:18-1:41	No-trade proof	The best proof is the manipulated case. Same system, same asset, lower market integrity. FairFlow blocks the trade, locks the route, and records why.
1:41-2:00	Why FairFlow wins	Close on the judging criteria: retail fairness, agentic depth, risk-first design, and inspectable proof. Better systems, not bigger bets.

Presenter tip: speak slower than feels natural. The script is short enough to leave room for live clicks.

5. Proof Links To Copy Live

Use one or two of these if judges ask how claims can be verified.

Proof	Path	Use when
Current audit	/api/audits/4962d31c22578f092077b27265e62d150111e5b011a0c25105cb ead73b96993b	A judge asks for the raw decision report.
Evidence pack	/api/audits/4962d31c22578f092077b27265e62d150111e5b011a0c25105cb ead73b96993b/evidence-pack	A judge asks for the single verifier bundle.
Submission kit	/api/audits/4962d31c22578f092077b27265e62d150111e5b011a0c25105cb ead73b96993b/submission-kit	A judge asks what to record or submit.
Receipt	/api/audits/4962d31c22578f092077b27265e62d150111e5b011a0c25105cb ead73b96993b/receipt	A judge asks how retail protections are explained.
Anchor proof	/api/audits/4962d31c22578f092077b27265e62d150111e5b011a0c25105cb ead73b96993b/anchor-proof	A judge asks where blockchain enters the system.

AUDIT HASH	RECEIPT	ANCHOR
4962d31c2257	86/100	0x4962d31c22
show this on screen	BGA alignment	contract-ready bytes32

6. Backup Plan If The Live App Slows

Keep control of the story even if a network or browser hiccup appears.

Problem	Fast response	What to show
Bybit is slow	Switch to Calm or Manipulated deterministic scenario.	The project intentionally has stable fallback scenarios.
Browser refresh takes time	Use the PPT while the app reloads.	Slide 4 shows the Competition Runway; slide 5 shows no-trade proof.
Judge asks if this trades real money	Say: paper-only by design; live execution is intentionally not implemented.	Safety boundary in README and PDF.
Judge asks what is blockchain-for-good	Say: audit hashes and anchor payloads reduce information asymmetry without custody or live trading.	Evidence Pack and Anchor Proof.
Judge asks what to submit	Use SUBMISSION.md and the Submission Kit panel.	PPT, script, walkthrough PDF, evidence endpoint.

7. Final Close

Say this after showing Manipulated -> NO_TRADE.

Closing line

FairFlow is not trying to win a pure PnL contest. It is infrastructure for safer retail participation: agentic review, risk-first route gating, no-trade discipline, and verifiable audit proof.

Better systems, not bigger bets.

- End on Manipulated / NO_TRADE, not on a return number.
- Copy the evidence pack or audit hash as the proof handoff.
- Remind judges that live execution is intentionally locked out.
